DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 14-15, 17-18, and 20-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Melrose (US 5062133).

Melrose discloses a communication device, its method operation, and a program for controlling its operation, comprising the means and steps for determining in response to receiving an incoming call, whether the communication device is in one of a reception possible condition and a reception impossible condition (301), and performing reception of the incoming call when the reception determination means determines that the communication device is in the reception possible condition (col. 10, lines 17-37), and for performing reception of the incoming call regardless of whether the communication device is in the reception impossible condition, when the communication device is in a specific mode, the specific mode being an answering machine mode (col. 5, lines 35-46).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2626

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 16, 19, and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Melrose as applied to claim 14, 17, and 20 above, and further in view of well known prior art (MPEP 2144.03).

While Melrose does not disclose the means and steps for not performing reception of an incoming call when the determination is made that the communication device is in a reception impossible condition and the communication device is not in the specific mode. However, it is old and well known to not receive an incoming call when a communication device is in a reception impossible condition and there are no modes set to handle the incoming call.

If not already inherent, it would have been obvious to one of ordinary skill in the art to have modified Melrose, in view of the well known prior art, to not receive an incoming call when a communication device is in a reception impossible condition (e.g., both the fax and answering machine are not operational) in order to prevent unnecessary, unwanted, and/or misleading communication with the caller.

Allowable Subject Matter

Claims 1-13 are allowed.
